

## CE P20 Kit

### Product Bulletin

**Description** An environmentally friendly, water-based, temporary (short-term) sealing system based on the application of a fluid which sets in a time dependent manner to form a solid polymeric material within valves and pipelines. CE P20 Kit is supplied as a two-part Kit consisting of Base and XL, the components of which are mixed together at the work site before being injected into the area where sealing is required. When the system has been repaired the CE P20 can be easily removed or broken down in-situ to allow the system to return to normal operating conditions.

**Application** CE P20 Kit is used to provide a temporary barrier to isolate pipelines and valves where leaks are present, allowing intervention to carry out a repair.

<b>Physical data</b> Appearance	Base & XL - milky liquids
Odour	Base & XL - odourless
Solubility	Base & XL - Miscible with fresh water and sea water at all dilutions
pH of mixed product	≈ 7
Density of mixed product	≈ 1.00 g/cm <sup>3</sup> at 20°C

**Packaging** Available in 5 litre to 25 litre volume Kits.

CE P20 Kit's components have been evaluated separately under the Offshore Chemicals Regulations in the UK. In accordance with the Harmonised Offshore Chemical Notification Format, they have both been placed by CEFAS in the Non-CHARMable Products, OCNS Group E with no Substitution warnings. The materials are 100% PLONOR. CEFAS templates and SDS for both components are available on request.

Date of Review: 26/05/2021
